MUSTIMUHW

FIRST NATIONS HEALTH
HOME & COMMUNITY CARE

The Mustimuhw Community Electronic Medical Record (cEMR) software is designed to support Home and Community Care (HCC) delivery in First Nations community-based service organizations. Designed as a client-centric system, the cEMR supports safe and effective documentation for HCC teams, including tools to support greater coordination and collaborative care across other programs and service delivery areas within the Health Centre or clinic.

Supporting Home & Community Care Teams

The Mustimuhw cEMR is used by First Nations Home and Community Care teams across the country. It is an easy-to-use software system that is configured to support the unique needs and HCC workflow of each organization. With features like, HCC charting and assessment tools, referral management, intake and HCC program admission, medication management, and follow-up / task management.

The software's diverse capabilities help improve coordination across teams, supports reporting and business intelligence, and increases program efficiency.

Scheduling

The Mustimuhw cEMR has a Homecare Scheduler that helps teams work more efficiently, enabling them to manage scheduling, generate and review the daily schedule, provide staff with a copy of their calendar with their client appointments, and verify and chart visits.

Reporting

The cEMR can easily generate a number of HCC reports including the Home and Community Care Annual Report (DCI), eSDRT and CBRT. Managers can access operational and program-specific reports with key information that enables them to evaluate and plan for continual service improvements.

KEY BENEFITS

Manage HCC Client Information More Effectively and Securely

Improve Coordination, Continuity of Care and Information Sharing

Standard and Custom HCC Charting Templates, Assessments and Forms

Efficient & Robust Reports for HCC and other Health Centre programs
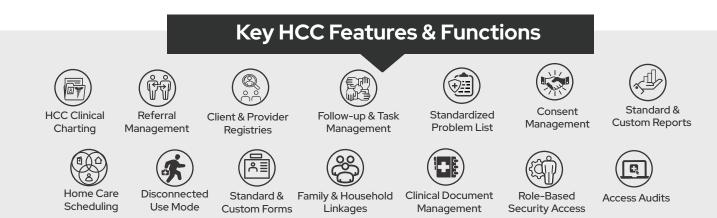

Manage Schedules and Client Appointments
